1. I attempted to login in my OBT laptop, around the time i had just started and mistakenly, kept putting the wrong password repeatedly.
2. This caused the computer to lock the ability to re enter it and gave instructions to either put in a different code or restart the computer.
3. I then clicked on the restart button on the screen and this caused the computer to refresh and be re-able to type in the password again.
4. I then put in the password again and checked again for any errors, after that I was able to log back in and use the laptop.
